

brtlb

Brand Book v0.1

Developer handoff for pediatric AI scribe app

Core idea: BRTL B removes what gets in the way while preserving what matters.

1. Brand foundation

Decision area	Selected direction
Brand name	brtlb, all lowercase
Pronunciation	Bartleby
Category	Pediatric AI scribe / pediatric documentation assistant
Core idea	Removes what gets in the way while preserving what matters
Primary visual metaphor	Subtraction: the three dots represent removed friction, not missing meaning
Primary palette	Graphite / Seafoam / White
Wordmark direction	Soft grotesk; compact but legible; avoid overly tight l/b spacing

Positioning lines

Line	Use
Less noise. Same meaning.	Primary brand tagline
Pediatric documentation, compressed.	Category descriptor / product context
Chart less. Notice more.	Clinician-facing campaign or hero line

Brand should feel

- Modern, calm, precise, and useful
- Abstract rather than medical or pediatric-cute
- Trustworthy for clinicians and buyers
- Quietly intelligent, not flashy or magical

Avoid

- Stethoscopes, hearts, crosses, teddy bears, crayons, mascots, kid-coded illustration
- Robots, sparkle-heavy AI tropes, generic hospital blue
- Over-compressing the wordmark until the l and b merge

2. Logo system

Primary logo: three seafoam subtraction dots above the lowercase brtlb wordmark. The dots should be aligned in a straight row and centered above the wordmark.

Required variants

Variant	Usage guidance
Primary stacked lockup	Default brand usage: dots above brtlb
Wordmark only	Use when vertical space is limited or dots are repeated elsewhere
Dots only	App icon, favicon, loading state, small UI brand moments
Dark lockup	Use on graphite or dark surfaces
Light/reversed dots	Use on pale seafoam or light brand surfaces
Do not use	Compact horizontal dots + wordmark lockup has been removed from consideration

Spacing principles

- Dots sit above the wordmark, not beside it, for the primary lockup.
- The row of dots should feel intentionally aligned, not random.
- Keep enough letter spacing that brtlb reads clearly; the l and b must not blend.
- The dot row may be used alone as a unique mark.

3. Wordmark

Current shortlist: F1 or F2. Both are soft grotesk directions. The production font should be selected or customized by the designer/developer based on rendering in the app environment.

Option	Direction	Notes
F1	Soft grotesk / current lead	More precise and premium. Recommended default unless it feels too cold in UI.
F2	Rounded system grotesk	Warmer and more approachable. Good fallback if F1 feels too engineered.

Wordmark implementation notes

- Use lowercase: brtlb.
- Use a semibold weight as the starting point.
- Use slightly open tracking; avoid extreme negative tracking.
- Check small-size rendering in the app header, login screen, favicon, and mobile app icon context.
- Custom kerning may be needed around t-l-b.

Suggested CSS starting point

```
font-family: Inter, ui-sans-serif, system-ui, -apple-system, BlinkMacSystemFont, 'Segoe UI', sans-serif;
font-weight: 600;
letter-spacing: -0.035em;
```

4. Color palette

Primary palette: Graphite / Seafoam / White. This keeps the app sleek and health-tech without strong medical imagery.

Graphite #1F2328	Soft Graphite #3D444D	Seafoam #A8E6CF	Pale Seafoam #E8FAF3	White #FFFFFF	Mist #F6F8FA
----------------------------	---------------------------------	---------------------------	--------------------------------	-------------------------	------------------------

Color tokens

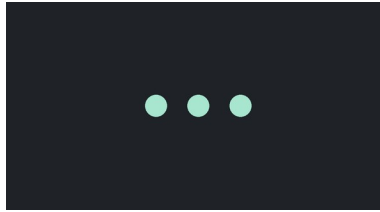

Token	Hex	Use
--brtlb-graphite	#1F2328	Primary text, dark surfaces, app icon background
--brtlb-soft-graphite	#3D444D	Secondary text, softer dark surfaces
--brtlb-seafoam	#A8E6CF	Primary accent, dots, selected states
--brtlb-pale-seafoam	#E8FAF3	Soft accent backgrounds
--brtlb-white	#FFFFFF	Primary background
--brtlb-mist	#F6F8FA	Secondary background / app chrome

Accessibility notes

- Graphite on white is suitable for body text and interface labels.
- Seafoam should generally be used as an accent, not as small text on white.
- Use graphite text on pale seafoam for readable callouts.
- For buttons, prefer graphite background with white text and seafoam accents.

5. App icon

Selected app icon direction: I1 - three seafoam dots centered on graphite. Keep the icon flat, simple, and high-contrast.

App icon specification

Element	Guidance
Background	Graphite #1F2328
Dots	Seafoam #A8E6CF
Dot count	Three
Dot arrangement	Straight horizontal row, centered
Style	Flat; no gradients required
Corner radius	Use platform-appropriate squircle/corner radius
Do not	Do not randomize dot placement; do not add medical symbols

Small UI uses for dots

- Favicon and app icon
- Loading state or recording/processing indicator
- Section divider in marketing pages
- Subtle brand accent in onboarding

6. Motion concept

The motion concept explains the name without complicating the static logo. Use it for onboarding, a splash screen, website hero animation, or loading transition.

Storyboard

Step	Visual	Meaning
1	bartleby, with a/e/y highlighted	Start with the literary reference
2	b·rtl·b·	Vowels become dots
3	Dots lift above the wordmark	Removed pieces become the subtraction mark
4	brtlb resolves below the dots	Less noise, same meaning

Motion guidance

- Keep it subtle and quick: around 1.5-2.5 seconds for a full reveal.
- Avoid bouncy or playful motion; use calm easing.
- Do not make the static logo b·rtl·b·. That form is for animation/storytelling only.
- The final resting state should always be the three dots above brtlb.

Example implementation logic

bartleby -> b·rtl·b· -> dots rise -> brtlb compresses into final wordmark

7. Developer handoff notes

Recommended current lead

Decision	Recommendation
Font	F1 as starting point; test F2 if F1 feels too cold
Dot spacing	A or E remain open; start with A for visibility
Logo variants	Use L1-L5; do not implement L6
App icon	I1
Motion	Use only as optional brand reveal; static logo remains dots above brtlb

Implementation checklist

- Create SVG versions of primary logo, dots-only mark, dark lockup, and wordmark-only lockup.
- Add color tokens to the app theme.
- Use the dot mark for favicon/app icon/loading states.
- Confirm wordmark legibility at 16px, 24px, 32px, and header sizes.
- Check dark and light mode contrast.
- Avoid substituting generic ellipsis icons for the three-dot mark; use the custom mark assets.

Included assets in package

- brtlb_primary_logo.svg
- brtlb_dots_mark.svg
- logo_primary_light.png
- logo_primary_dark.png
- logo_dots_only_dark.png
- app_icon.png
